

Accuracy.

Aerial Services creates compelling visions for you to engage your world in meaningful ways. We make no compromises to the accuracy necessary for your project.

Speed.

Advanced sensors and robust software tools combined with the expertise of our staff are used to assist Aerial Services in producing a rapid turnaround time for project deliverables.

Innovation.

Technology is always evolving. Aerial Services uses the latest technology to ensure we exceed your project expectations.

Aerial Services

Aerial Services is an integrated team of professionals providing premier geospatial solutions to government, utilities, engineers & other clients. Based in the Iowa heartland for nearly 50 years, Aerial Services' energetic work ethic, cutting-edge technology & experienced staff combine to harness the power of geographic information and solutions that are perfect for you.

What We Can Do For You

Aerial Services supports your operations with a full line of geospatial services. From the acquisition of the photography and LiDAR data, ground control and survey, to the delivery of the digital 3D mapping data, orthophotography, terrain models, LiDAR classification, and/or GIS solutions, all of which can be produced in-house. This enables us to tailor the QA/QC of any project to best meet your schedule and specifications. Our breadth of services compliments our corporate culture and reputation for producing geospatial services known for quality, accuracy, and timeliness.

Electric Utility Solutions

Aerial Services has offered specialized geospatial solutions to the Electric Utility profession for nearly 50 years. Our geosolutions are seamlessly integrated to solve your critical needs. Using Static, Mobile, and Airborne systems for expert data construction we can combine these technologies to give you the answers you need for the tasks at hand. Precision solutions are customized and sent via eDelivery systems for timely deployment and ongoing analysis operations.

We have listened to our client base and developed both standard and customized solutions delivering data with which to make critical decisions needed every day. It is the ASI delivered data that results in specialized decisions for your organization.

Contact Us Today for a Consultation

Aerial Services' team of Geospatial Solution Managers are committed to customizing an optimal solution for your project. With office locations throughout the United States, Aerial Services is available to complete your project expectations. If you would like a free quote or need help understanding how to best meet your remote sensing and mapping project objectives, call one of our Geospatial Solutions Managers today!

Electric Utility Solutions Components Include:

- Corridor LiDAR & Aerial Photography
- Mobile LiDAR Integration
- Electric Transmission/NERC-FAC008
- Vegetation Management Analysis
- PLS-CADD Data Files & Other Format Deliverables
- Meteorological Data Collection
- Asset Management
- Feature Coding
- Thermal "HotSpot" Detection
- Geo-Referenced Video
- Visualizations
- eDelivery Systems
