

Accuracy.

Aerial Services creates compelling visions for you to engage your world in meaningful ways. We make no compromises to the accuracy necessary for your project.

Speed.

Advanced sensors and robust software tools combined with the expertise of our staff are used to assist Aerial Services in producing a rapid turnaround time for project deliverables.

Innovation.

Technology is always evolving. Aerial Services uses the latest technology to ensure we exceed your project expectations.

Aerial Services

Aerial Services is an integrated team of professionals providing premier geospatial solutions to government, utilities, engineers & other clients. Based in the Iowa heartland for nearly 50 years, Aerial Services' energetic work ethic, cutting-edge technology & experienced staff combine to harness the power of geographic information and solutions that are perfect for you.

What We Can Do For You

Aerial Services supports your operations with a full line of geospatial services. From the acquisition of the photography and LiDAR data, ground control and survey, to the delivery of the digital 3D mapping data, orthophotography, terrain models, LiDAR classification, and/or GIS solutions, all of which can be produced in-house. This enables us to tailor the QA/QC of any project to best meet your schedule and specifications. Our breadth of services compliments our corporate culture and reputation for producing geospatial services known for quality, accuracy, and timeliness.

Mining & Aggregate Solutions

Aerial Services provides safe and accurate turnkey geospatial solutions when creating maps for the Mining and Aggregate industry. Digital base maps and volumetric studies form the core deliverables for our clients. Then reacquisition at given intervals; such as every three months, six months or as required, allows our clients a current snapshot so that they can efficiently plan for the future. Our solutions are based on nearly 50 years of trusted remote sensing experience. Before a project begins our team of experts meet with the customer to actively listen to every specific issue, which ensures proper project planning and execution.

Contact Us Today for a Consultation

Aerial Services' team of Geospatial Solution Managers are committed to customizing an optimal solution for your project. With office locations throughout the United States, Aerial Services is available to complete your project expectations. If you would like a free quote or need help understanding how to best meet your remote sensing and mapping project objectives, call one of our Geospatial Solutions Managers today!

Mining & Aggregate Solutions Components Include:

- GIS Engineering
- GeoData Fusion
- Volumetric, Site Plan Preparation
- Precision Multi-Spectral Imaging
- Visualizations
- eDelivery Systems
- Aerial Photography & LiDAR
